## Supplementary investigations to PTB's evaluation of $G$

W Michaelis, J Melcher and H Haars 2004 *Metrologia* **41** L29–L32

At an advanced stage of our investigations, a private communication from Clive Speake [1] pointed out that the discrepancy between our earlier measurements of  $G$  [2] and the CODATA value may have been due to additional contributions to the electrostatic calibration torque from previously omitted partial capacitances, as discussed in section 2.3 of [2].

We gratefully acknowledge this suggestion, which eventually proved to be correct. Due to a misunderstanding during the reviewing process, this acknowledgment was omitted in the recent publication.
